## Coding scheme for sequential discourse Gerry Stahl

The coding scheme in Table 1 was developed based on the analysis of adjacency pairs in (Schegloff, 2007). It was applied to the log of POW Session 4 of Team B, conducted during VMT SpringFest 2006 (see attached Appendix). This scheme was discussed in (Stahl, 2011a; 2011b; 2011c; 2011d). The same log was analyzed in various other VMT publications, including some collected in (Stahl, 2009).

The basic idea is that discourse is built up hierarchically: from (g) various indexical references (e.g., "that") in (f) textual utterances (e.g., chat postings) contributing to (e) adjacency pairs (e.g., question/answer). Sequences of adjacency pairs (including extensions and recursive embeddings) form (d) discourse moves, which contribute to (c) conversational topics (that are opened and closed). Topics are included in larger (b) group events, which make up (a) the entire session (e.g., Session 4 of Team B).

In Table 1, examples of (c) through (f) are included under those headings.
Scheloff's symbols are listed for use in coding utterances in adjacency pairs. For each symbol, its meaning is given.
A list of some common FPPs of adjacency pairs are listed, with their corresponding SPPs.
Inserted in the bottom of Table 1, the four typical Turn Constructional Units are listed, with their common constituent utterances. These are discussed in (Zemel \& Stahl, 2010).

Table 1. Coding Scheme.

| VMT 2006 | Spring Fest | Team B | Session 4 |  |  |  |  |

| 723 | 1865 | 5/18/06 |  | 20:39:26 | 0:06:15 | bwang8 sent an email to mentors. Subject: Gerry, we found the equation! Message: We found the equation for the number of squares in the diamond shortly after you left. It is $4\left(n^{\wedge} 2\right)$. After we saw the pattern of $1+3+5+7 . . . .$. , we summarized it with ( 2 n ) $\mathrm{n} / 2$ and that simplify to $n^{\wedge} 2$. So we times it by four and got the equation. |  |  |  |  |  | ni | announce | noninteractive |  | Closing |  |

| 738 | 1880 | 5/22/06 |  | 16:27:30 | 0:10:37 |  |  |  | Gerry sent an email to room members and the mentors. Subject: $4 n^{\wedge} 2$ Message: Team B: You did a great job finishing up this problem, making your argument clear, making sure you all understood, and checking the answer. Are you going to do the same thing with the grid world problem this week? It is an even more interesting problem I think. I guess some of you worked on it last year, but you might try to do a more thorough job this week and post your analysis on a new page of the wiki. Or else come up with some other problems you want to discuss. Have fun! --Gerry |  |  | ni | announce | noninteractive |  | Follow-up |  |
